This CDS clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Pusion(TW) cloning system between the Sall and Hindil sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site and before 'Hindil site to maintain reading frame.

Clone distribution: http://bioinfo.clontech.com/orfclones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      VITER BY CLUE THANGS TO VORTREAD SONDER TREAD FOR YOUR TREAD TO THE BY CLUE THANGS TO VORTREAD SONDER TREAD TO THE SONDER SONDER THE SONDER THE SONDER THE SONDER THANGS TO THE SONDER THANGS TO THE SONDER THANGS TO THE SONDER THANGS TO THE SONDER THANGS THE SONDER THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THANGS THAN

This CDS clone is a part of a collection of human full length
expression clones generated by BD Biosciences Clontech and the

Harvard Institute of Proteomics. Each CDS has been cloned in two

forms: with and without stop-codon (to allow fusion with C-terminal

tag). The CDS has been directionally cloned using BD In-Fusion(TM)

cloning system between the Sall and HindIII sites of the pDNR-DUAL

vector. Additional sequences in the clone: 'ACC' after Sall site

and before 'ATG' to provide Kozak consensus sequence; 'GG' after

last codon and before HindIII site to maintain reading frame.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of a contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   33517: contig of 33517 bp in length 33617: gap of 100 bp 42736: contig of 9119 bp in length

consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular compounds for the treatment of cellular compounds for the treatment of cellular compounds for mediate agents that are are capable of modulating the activity of target proteins having motor companies, such that the target protein directly or indirectly produces ADP composphate. Furthermore, this activity can be determined using composphate. Furthermore, this activity can be determined using compositive modulators of the target protein, which is a method that identifies modulators of the target protein, which is a communomodulators and antiinflammatories. Accordingly, through gene compositive therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polymuclectide sequence is human KID DNA (SeqID 7) encoding a full length companies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candiate agents that bind to a target protein, modulators of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating autoimmune conflication induced after medical procedures including surgery and proliferation induced after medical procedures including a human microtubule motor protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                               New isolated microtubule motor protein, useful for screening modulators for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that accepable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and nillammatchies. Accordingly, through gene therapy, and be sequence is human KID DNA (SeqID 3) encoding a full length and a true and a think that a treatment of cancer, hyperplasias, and an antiful and a full length and a true and a treatment of cancer.

activity, a method of testing for APPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restencesis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with Kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders such as cancer, hyperplasias, restencesis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating autoimmune diseases, arthritis, graft resisting, MID and for treating autoimmune diseases, arthritis, graft resisting, inflammatory bowel disease and angioplasty. This sequence represents DNA encoding a human microtubule motor protein of the invention. Note: The specification states that this encourage the protein featured as SEQ ID NO:4, but this does not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           497
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       137

WO2004055050-A2 Homo sapiens

The present invention describes a method for modulating the expression of a thantos (dasth)-associated protein (THAP) responsive gene. The method comprises modulating the interaction of a THAP-family polypeptide or its biological fragment with a mucleic acid, and so enhancing or repression the expression of the THAP responsive gene. Also described. (1) a method competing a manacription of a gene responsive to a THAP responsive competing a than responsive competing a transcription of a THAP responsive element. (4) a cell comprising a transcription factor decoy described and a consisting a transcription factor decoy described and a THAP-family polypeptide or its biological fragment. (3) a transcription factor of decoy described and a THAP-family polypeptide or its biological fragment. (5) methods of modulating the interaction between a nuclet acid and a THAP-family polypeptide or its biological fragment; (6) a weetor packaging cell line comprising a transcription factor decoy described by a THAP-family polypeptide or its biological fragment; (7) a method of constructing a cell which expresses a recombinant THAP-family polypeptide (6) a method of ameliorating complex; (6) a vector packaging cell which expresses a recombinant into the nucleus; (10) methods for reduction mediated by a THAP/chemokine complex; (7) methods of identifying a test compound that modulates transcription cassociated with a condition mediated by a THAP/chemokine or an insufficient appropriate, cardiovascular for reduction the compression or activation cassociated with a condition metastasis of a cnecrous tissue, excessive or insufficient appropriate appropriate pronocter operably linked to a nucleic acid comprising a THAP responsive pronocter operably linked to a nucleic acid comprising a promocra described above or that expresses and neurodegeneration comprising a thyperpride or its biological fragment; (13) an involvement or insufficient conding a metastable product operably linke appression or activation conding a detectable product (12) a responsive gene for preventing or treating e.g. cancer or inflammation, comprises modulating the interaction of a THAP polypeptide with a nucleic a cancerous tissue, excessive insufficient apoptosis, cardiovascular disease or neurodegenerative seases. The present sequence is used in the exemplification of the expression of a Thanatos (death)-Associated Protein (THAP) Clouaire T; diseases. The present sequence is used in the inflammation, metastasis of Example 47; SEQ ID NO 426; 612pp; English. ΣÌ Roussigne (ENDO-) ENDOCUBE SAS. The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a comprises a naturally cocurring kinase polypeptide; (b) is a encodes a naturally occurring kinase polypeptide; (d) encodes the copypeptide in (a), except that it lacks one or more, but not all, of an N-terminal domain, c-terminal catalytic domain, a catalytic domain, a colled-coil structure region, a spacer region and a C-terminal domain, a colled-coil structure region, a spacer region and a C-terminal domain, a colled-coil structure region, a spacer region and a C-terminal tail; or (e) is a complement of (d). The nucleic acid molecules, collypeptides, methods and substance are useful for treating cancers, immune-related diseases or disorders, cardiovascular disease, brain or euronal-associated diseases, and metabolic disorders. The disorders are parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, coviral infections, infections caused by prions, ocular diseases, migraines, pain, excual dysfunction, mood disorders, attention disorders, cognition disorders, dyskinesias, metabolic disorders and organ transplant rejection. This sequence corresponds to the DNA encoding one of the invention.
